

ABSTRACT OF THE DISCLOSURE

One embodiment of the disclosed invention comprises a servicing system appropriate for many environments, including medical environments. The servicing system may be used to position, organize, support, and move commonly used equipment and services in a desired area of a facility. The servicing system may include a suspension system, a service module, a detachable equipment support assembly, and a mobile platform for decoupling, docking, supporting, and moving the equipment support assembly to and from the service module. The suspension system may be fixedly secured to structural reinforcement members in a ceiling, the service module may be attached at a distal end of the suspension system, and the equipment support assembly may be removably attached to the service module.
